

### VOLTAGE-MODE PWM CONTROLLER

The KA7500B is used for the control circuit of the pulse width modulation switching regulator. The KA7500B consists of 5V reference voltage circuit, two error amplifiers, flip flop, an output control circuit, a PWM comparator, a dead time comparator and an oscillator. This device can be operated in the switching frequency of 1 KHz to 300 KHz.

### FEATURES

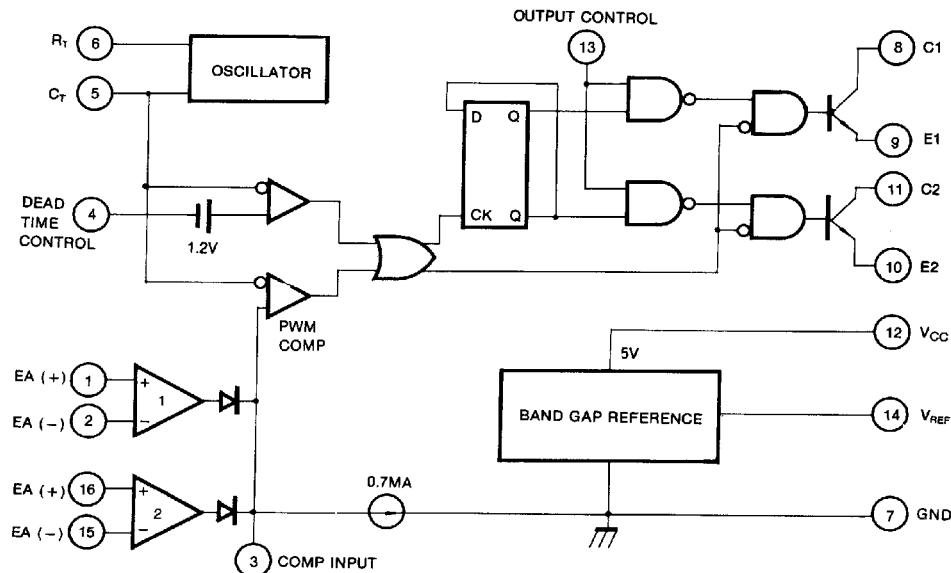

- Internal regulator provides a stable 5V reference supply trimmed to 1 %
- Uncommitted output TR for 200mA sink or source current
- Output control for push-pull or single-ended operation
- Variable duty cycle by dead time control (pin 4)
- Complete PWM control circuit
- On-chip oscillator with master or slave operation
- Internal circuit prohibits double pulse at either output

### ORDERING INFORMATION

| Device   | Package | Operating Temperature |
|----------|---------|-----------------------|
| KA7500B  | 16 DIP  | 0 ~ + 70°C            |
| KA7500BD | 16 SOP  | 0 ~ + 70°C            |

### BLOCK DIAGRAM

## ABSOLUTE MAXIMUM RATINGS

| Characteristic                           | Symbol    | Value                         | Unit |
|--|-----------|-------------------------------|------|
| Supply Voltage                           | $V_{CC}$  | 42                            | V    |
| Collector Supply Voltage                 | $V_C$     | 42                            | V    |
| Output Current                           | $I_O$     | 250                           | mA   |
| Amplifier Input Voltage                  | $V_{IN}$  | $V_{CC} + 0.3$                | V    |
| Power Dissipation ( $T_A = 25^\circ C$ ) | $P_D$     | 1 (KA7500B)<br>0.9 (KA7500BD) | W    |
| Operating Temperature Range              | $T_{OPR}$ | 0 ~ +70                       | °C   |
| Storage Temperature Range                | $T_{STG}$ | -65 ~ +150                    | °C   |

## ELECTRICAL CHARACTERISTICS
