

DESCRIPTION

The dual monolithic silicon Zener diodes are designed for applications requiring transient overvoltage protection capability. They are intended for use in voltage and ESD sensitive equipment such as computers, printers, business machines, communication systems, medical equipment and other applications. Their dual junction common anode design protects two separate lines using only one package. These devices ideal for situations where board space is at a premium.

**FEATURES**

- SOT-23 package allows either two separate unidirectional configurations or a single bidirectional configuration.
- Working peak reverse voltage 3V to 22V
- Standard Zener breakdown voltage 5.6V to 27V
- Peak power 24 or Watts @ 1.0ms (unidirectional) per Figure 6 Waveform
- ESD Rating:
 - Class 3B (>16kV) per the Human Body Model
 - Class C (>400V) per Machine Model
- ESD Rating of IEC61000-4-2 level 4, ± 30 kV contact Discharge
- Low leakage < 5.0 μ A

MACHANICAL DATA

- SOT-23 package
- Flammability Rating: UL 94V-0
- Packaging: Tape and Reel
- High temperature soldering guaranteed: 260°C/10s

APPLICATIONS

- Computers
- Printers
- Business Machines
- Communication systems
- Medical equipment

ELECTRICAL CHARACTERISTICS CURVE

Figure 6. Pulse Waveform

Figure 7. Pulse Derating Curve

Figure 8. Maximum Non-repetitive Surge Power, P_{pk} versus PW

Power is defined as $V_{RSM} \times I_Z(pk)$ where V_{RSM} is the clamping voltage at $I_Z(pk)$.

Figure 9. Maximum Non-repetitive Surge Power, $P_{pk(NOM)}$ versus PW

Power is defined as $V_Z(NOM) \times I_Z(pk)$ where $V_Z(NOM)$ is the nominal Zener voltage measured at the low test current used for voltage classification.
